

### BOULDERING WALLS

Low height climbing walls (max. 4.5 metres), fitted with a safety matting system and used without the need for ropes by climbers of all abilities

Bouldering is a very popular form of climbing and the walls can be installed in a wide variety of locations both indoors and out

Designed to provide a wide range of dynamic angles and features in keeping with the gymnastic nature of the activity

Indoor walls typically constructed in multi-faceted Ply with a dense matrix of fixing points for bolt on holds and the potential to create endless challenges

Outdoor structures are also available fabricated in a choice of resilient materials including sprayed and carved concrete and coated fibreglass
